Results

NSERC CRSNG

Data: www.worldrowing.com

1. Scrape PDF files from World Championships
2. For each race, extract data from the 3 PDFs
3. Join the race data from the 3 PDFs
4. Combine all races into one file
5. Make code and data available on github!

   github.com/danichusfu/rowing_pacing_profiles

Goals!

- Identify the pacing profiles being used by each boat in World Championship 2000m Rowing
- Identify which race factors are associated with exhibiting a pacing profile

Identification of Pacing Profiles

- Cluster boats based on their average speed at each 50m split
- Problems:
  - Longitudinal data
  - Magnitudes of average speed depend on factors such as boat size, weight class, age group and gender

Raw Speed Curves

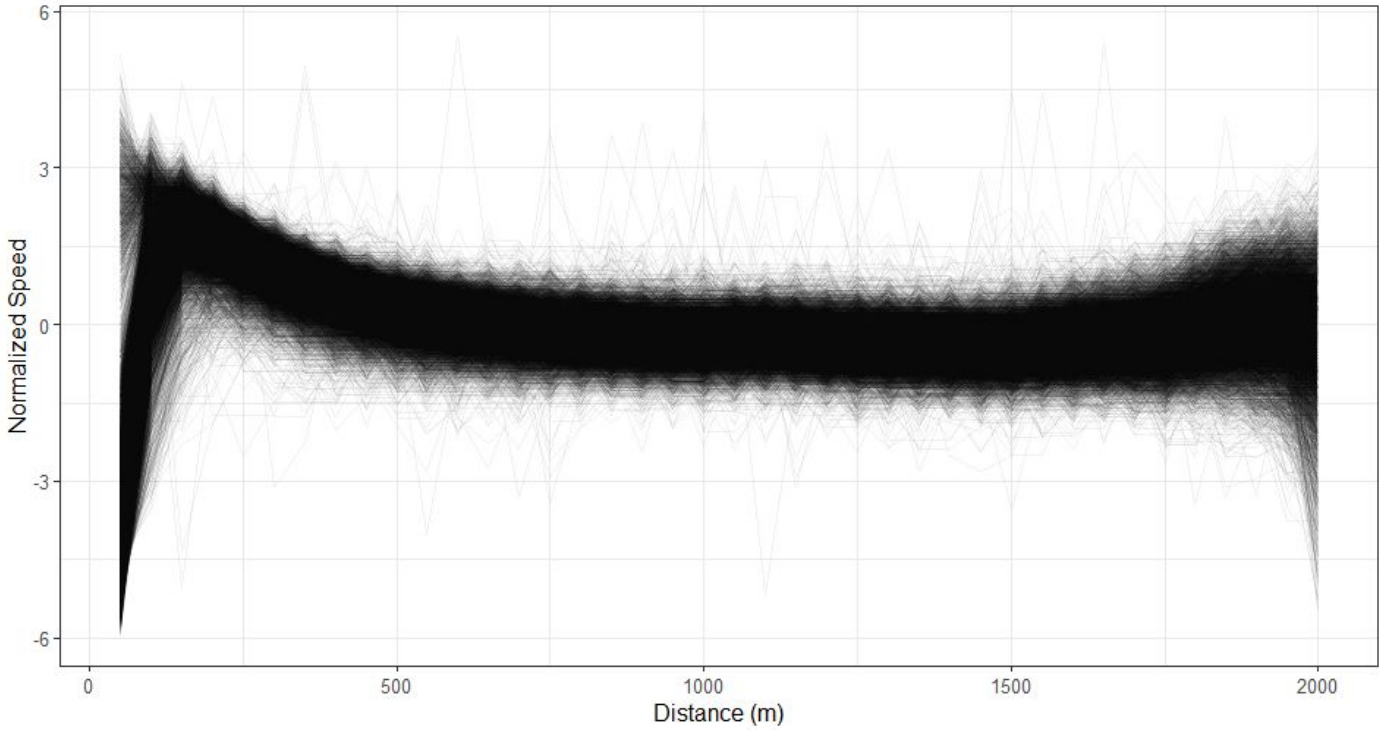
Normalized Speed Curves



NSERC CRSNG

k-Shape Clustering

- Uses Shape-based distance (SBD) as an alternative to Dynamic Time Warping (DTW)
- SBD is computationally more efficient than DTW
  - O(m log(m)) to $O(m^2)$
- Small sacrifice in accuracy in experimental settings

Conclusions

- Can identify pacing profiles with k-Shape Clustering
- Interesting preliminary results for which race factors affect pacing profiles
- Available data: github.com/danichusfu/rowing_pacing_profiles
- I'd love your feedback and thoughts!

Limitations

- Observational Data
- Interaction terms are not fit in the model
- Cannot choose a “optimal” profile to help coaches and athletes
- Only uses World Championship Races
