1. Scrape PDF files from World Championships
2. For each race, extract data from the 3 PDFs
3. Join the race data from the 3 PDFs
4. Combine all races into one file
5. Make code and data available on github!

Goals!

- ▶ Identify the pacing profiles being used by each boat in World Championship 2000m Rowing
- ▶ Identify which race factors are associated with exhibiting a pacing profile

Identification of Pacing Profiles

- ▶ Cluster boats based on their average speed at each 50m split
- ▶ Problems:
 - Magnitudes of average speed depend on factors such as boat size, weight class, age group and gender
 - Longitudinal data

Raw Speed Curves

Normalized Speed Curves

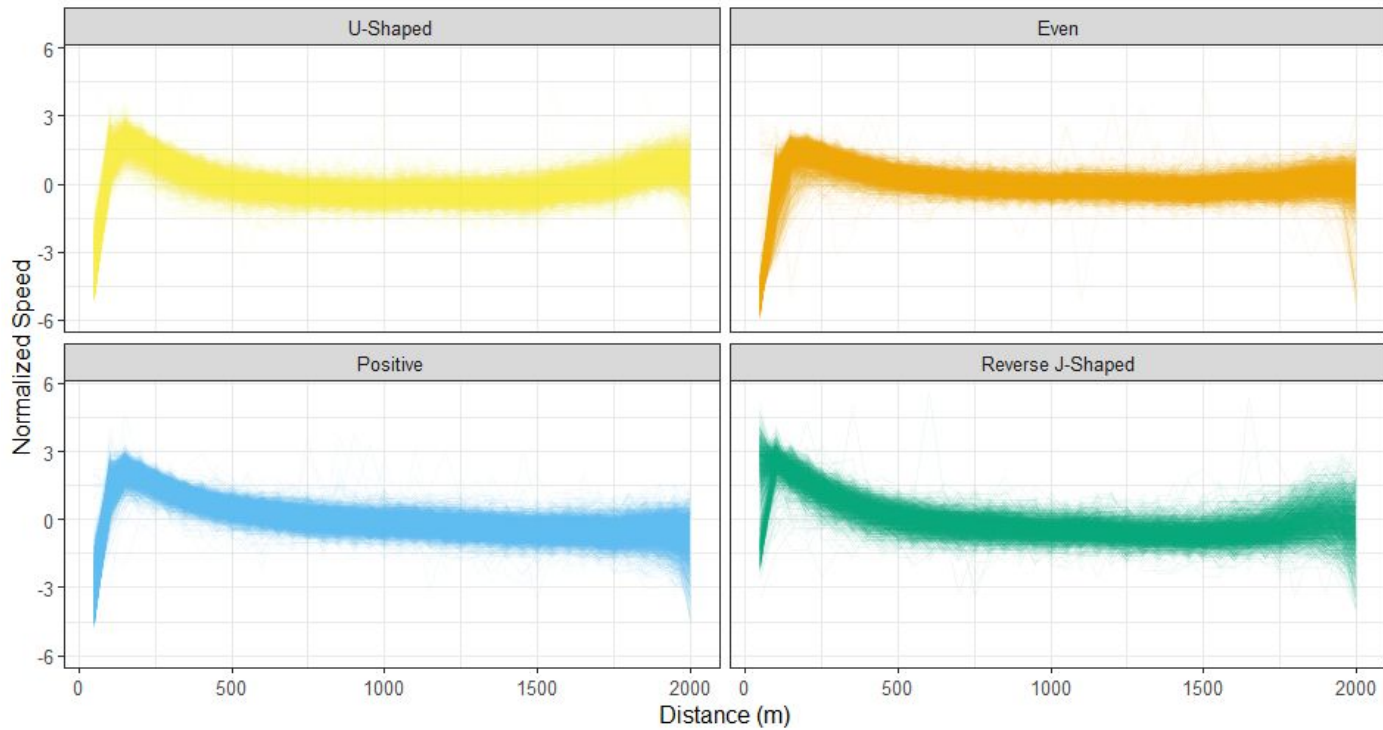

k-Shape Clustering

- ▶ Iterative process to minimize distance for an observation to a cluster centroid
- ▶ Uses Shape-based distance (SBD) (Paparrizos and Gravano 2016) as an alternative to Dynamic Time Warping (DTW)
- ▶ SBD is computationally more efficient than DTW
 - $O(m \log(m))$ to $O(m^2)$
- ▶ Small sacrifice in accuracy in experimental settings

Cluster Centroids

Pacing Profiles

Boat Sizes

Modelling Pacing Profiles

- ▶ Response variable is the identified pacing profile
- ▶ Modelled as a function of race factors
- ▶ Using multinomial logistic regression
 - Even profile is the baseline
 - Report the relative risk ratio for a one-unit increase in the variable

Model Results

	Positive	Reverse J-Shaped	U-Shaped
Intercept	0.90	0.77	1.41
Size: Doubles	0.48	0.38	0.68
Size: Quads	0.13	0.14	0.16
Size: Eights	0.04	0.08	0.04
Heat or Final: Heat	1.81	1.04	0.54
Race Placement: 2nd Place	0.86	1.02	1.21
Race Placement: 3rd Place	1.08	1.33	1.50
Race Placement: 4th Place	1.36	1.60	1.60
Race Placement: 5th Place	1.76	1.93	1.24
Race Placement: 6th Place	3.16	3.16	1.21
Discipline: Sweep	1.81	1.20	1.97
Gender: Women	1.88	1.68	1.66
Weight Class: Open	1.43	1.52	1.28

Boat Sizes and Heat/Final

Boat Sizes, Heat/Final and Placement

Limitations

- ▶ Observational Data
- ▶ Interaction terms are not fit in the model
- ▶ Cannot choose a “optimal” profile to help coaches and athletes
- ▶ Only uses World Championship Races

Conclusions

- ▶ Can identify pacing profiles with k-Shape Clustering
- ▶ Interesting preliminary results for which race factors affect pacing profiles
- ▶ Available data:
github.com/danichusfu/rowing_pacing_profiles
- ▶ I'd love your feedback and thoughts!
